# List of Tables

4.1	Data on the $\text{UO}_2$ phase. . . . .	71
4.2	The self diffusion of intrinsic defects in $\text{UO}_{2\pm x}$ and $\text{U}_3\text{O}_8$ . . . . .	72
4.3	Arrhenius fits to caesium data. . . . .	77
4.4	Arrhenius fits to iodine data. . . . .	79
4.5	Arrhenius fits to ruthenium migration data. . . . .	81
4.6	Relevant experimental $\text{U}_3\text{O}_8$ studies to date. . . . .	85
4.7	Relevant $\text{U}_3\text{O}_8$ simulation studies to date. . . . .	85
5.1	The $\text{UO}_2$ potential parameters used in this study. . . . .	87
5.2	The fission product potential parameters used in $\text{UO}_2$ . . . . .	90
5.3	Ionization potentials used in this study. . . . .	91
5.4	Predicted $\text{UO}_2$ crystal properties. . . . .	93
5.5	Predicted formation enthalpies of intrinsic defects in $\text{UO}_2$ . . . . .	98
5.6	Calculated incorporation energies of Cs filled defects. . . . .	113
5.7	Calculated caesium equilibrium solution energies. . . . .	114
5.8	Predicted solution enthalpies and migration activation enthalpies of caesium in $\text{UO}_2$ as a function of stoichiometry. . . . .	117
5.9	Solution enthalpies of iodine in $\text{UO}_2$ . . . . .	119

5.10	Predicted solution enthalpies and migration activation enthalpies of iodine in $\text{UO}_2$ as a function of stoichiometry. . . . .	121
5.11	Solution enthalpies of Ru in $\text{UO}_{2\pm x}$ . . . . .	127
5.12	Comparison of ruthenium accomodation mechanisms in $\text{UO}_2$ . . . . .	130
5.13	Migration of ruthenium ions within $V_{U_2}$ like defects. . . . .	133
5.14	Predicted solution enthalpies and migration activation enthalpies of ruthenium in $\text{UO}_2$ . . . . .	135
5.15	Inter atomic potentials for the $\text{U}_3\text{O}_8$ system. . . . .	137
5.16	Predicted $\text{U}_3\text{O}_8$ crystal properties . . . . .	138
5.17	The effective equilibrium formation enthalpies of intrinsic defects in $\text{U}_3\text{O}_8$ and $\text{U}_3\text{O}_{8-z}$ . . . . .	139
5.18	Calculated caesium filled defect energies. . . . .	151
5.19	Equilibrium solution energies of $\text{Cs}_2\text{O}$ in $\text{U}_3\text{O}_8$ . . . . .	152
5.20	The predicted Arrhenius activation energies for caesium migration. . . . .	153
5.21	Solution energies are calculated relative to a hypothetical free neutral iodine ion. $\text{O}(n)\times\text{O}(n)$ indicates a di-vacancy trap where vacancies are not located in the same basal plane. . . . .	155
5.22	Solution energies are calculated relative to a hypothetical free neutral iodine ion. Larger oxygen di-vacancies are not reported here as their formation enthalpies are much higher than in $\text{U}_3\text{O}_{8-z}$ and play no part in stoichiometric $\text{U}_3\text{O}_8$ . . . . .	156
5.23	The solution energies (eV) for ruthenium ions in $\text{U}_3\text{O}_{8-z}$ and $\text{U}_3\text{O}_8$ . . . . .	162
6.1	Properties of interstitial sites in $\text{Y}_2\text{O}_3$ . . . . .	170
6.2	Buckingham potential parameters used for $\text{Y}_2\text{O}_3$ . . . . .	173
6.3	Shell model parameters. . . . .	174

---

6.4	Predicted $Y_2O_3$ lattice properties. . . . .	174
6.5	Experimental and predicted lattice volumes and lattice energies of $M_2O_3$ type ceramics. . . . .	177
6.6	The binding energies of neutral defect clusters. . . . .	178
7.1	Bulk and surface ions. . . . .	204
7.2	Summary of diffusion coefficients derived from MD results presented in Figures 7.19, 7.20, 7.21, 7.22 and 7.23. . . . .	230
